Computer engineer with nine years of production experience building and owning full-stack web systems end to end, from architecture through deployment, most recently specialized in bringing large language models into real production systems. At MySourcing I designed an AI orchestration layer exposing the company's product suite as tools callable by an LLM, on top of a multitenant, end-to-end encrypted chat platform architected as a unified API hub across products. I build with TypeScript, React, Node.js, Prisma and PostgreSQL, with deep prior experience in PHP/Laravel and C#/ASP.NET. My AI work is orchestration and integration — tool definitions, prompt design, permissions and failure paths — not model training or MLOps. I practise agentic engineering as a working method, using **Claude Code** and spec-driven development daily.

Core Competencies

- **AI orchestration:** LLM tool-calling layers in production, Claude API, prompt engineering, structured output contracts with human-escalation fallbacks, LangChain and LangGraph, agent workflows in n8n.
- **Backend and data:** TypeScript, Node.js, Express, NestJS, PHP, Laravel, C#, ASP.NET MVC, REST API design, Prisma and Drizzle ORM, queues and background jobs; PostgreSQL, MySQL/MariaDB, SQL Server (T-SQL), relational modeling, query optimization, indexing.
- **Frontend:** ReactJS, VueJS (2/3), AngularJS, Next.js, JavaScript, jQuery, Tailwind, Bootstrap, HTML/CSS.
- **Architecture:** Multitenant SaaS with per-tenant isolation, real-time systems (Socket.io), end-to-end encryption, third-party webhook integration, approval and requisition workflows, payment gateways (Stripe, PayPal, Conekta, OpenPay).
- **Infrastructure and practice:** Docker, Linux/Ubuntu, Nginx, Redis, AWS S3, Git workflow (branching, pull requests, code review), **Claude Code** and Spec-driven Development (Spec-kit), Scrum.

Professional Experience

- **Private client** **Remote, México**
2026–present
Freelance Full-Stack Developer
 - **CostoPreciso / CosteoMX**, a multi-tenant costing SaaS for Mexican SMEs in any industry. Sole developer, working specification-first with **Spec-kit** and **Claude Code**: a written project constitution, then 16 features each carried through spec, plan and tasks before implementation, close to 15,000 lines of specification.
 - Deterministic TypeScript costing engine isolated from all infrastructure with **346 passing tests**; NestJS, Drizzle ORM and PostgreSQL with row-level tenant isolation; React 18 and Vite on the front; deployed to an Ubuntu VPS with Nginx and systemd. Ongoing, not yet handed over to the client.
- **MySourcing** **Acapulco de Juárez, México (remote)**
2022–2026
Full-Stack Web & AI Developer Senior
 - Developed an **AI orchestration layer** exposing the company's product suite as tools callable by an LLM, automating cross-system workflows that previously required manual coordination.
 - Architected a multitenant real-time chat platform as a unified API hub across internal and external products, with per-company isolation, end-to-end encrypted file sharing and API rate limiting.
 - Built the full purchase-requisition lifecycle — creation, multi-level authorization, supplier management, payment tracking, transactional supplier email and real-time spend dashboards — and embedded its approval flows into the chat interface, removing context-switching for approvers.
 - Short client project (2026): integrated **Stripe** recurring membership subscriptions into a client association's **Next.js** site.
 - 2022–2024: HR modules for multi-company payroll, including the payroll calculation engine.
 - Stack: TypeScript, ReactJS, Node.js, Express, Socket.io, Prisma ORM, PostgreSQL, Tailwind, Docker, Claude API, Claude Code, Spec-kit; earlier PHP, Laravel, AngularJS, RxJS, MySQL. Scrum, inside ISO 27001-aligned platform security policies.
- **BOZ IT Development** **México**
2022
Desarrollador Fullstack Mid TypeScript
 - Developed modules for a multi-client financial projection system with complex transactional logic and a strict accuracy requirement; fixed critical bugs in calculation and data-validation flows. Stack: TypeScript, Node.js, SQL Server, DevExpress.

- **Básculas REVUELTA** **Torreón, México**
2021–2022
Webmaster Developer
 - Administered and improved the group's websites on ASP.NET MVC, Umbraco and AngularJS; installed and administered the Magento store for the livestock line and built custom plugins in PHP.
- **ATT / ProntoForms project** **Remote, México**
2020–2021
Freelance Full-Stack Developer
 - **Sole developer:** designed, built and deployed a complete warehouse and delivery-logistics platform, architecture through production. **Ran in production at 50–200 packages per day with 12 active drivers.**
 - Inventory with blind counts, automated discrepancy reporting and zone/rack tracking; logistics for dispatch, receipt and shipments with PDF manifests (DomPDF) and per-unit audit trails; ProntoForms webhooks processing GPS, field photos and rejection reasons in real time; scheduled Excel and PDF reporting on cron jobs and Laravel Queue.
 - Stack: PHP 8, Laravel 8, Vue.js, MySQL, Redis, Docker, AWS S3.
- **Grupo Batta Hermanos** **Torreón, México**
2019–2020
Analista de Desarrollo
 - Delivered two Ionic/AngularJS mobile apps, a Node.js/VueJS website and an ASP.NET MVC Core web service to onboard voucher distributors and supervise field staff, **increasing distributor quota and reducing processing times.**
 - Handled sensitive credit-area data directly in SQL Server (T-SQL); maintained VisCoi ERP plugins written in Visual Basic 6.0.
- **Asta Software** **Torreón, México**
2017–2019
Desarrollador Web y .NET
 - Built and maintained point-of-sale systems with electronic invoicing and airtime top-up integrations in C# and Windows Forms against SQL Server LocalDB, including .exe and database installation packaging for client deployment; **now one of the company's top revenue lines.**
 - Built dynamic sites in PHP/Laravel and e-commerce on the Aimeos framework, integrating the PayPal and Conekta payment gateways.

Independent Projects

- **Elvira Richards** (2018) — elvirarichards.com.mx. Talent page on WordPress with a custom PHP theme, custom modules and server maintenance, run alongside the Asta Software role.

Education

- **Instituto Tecnológico Superior de Lerdo** **Lerdo, Durango, México**
2010–2017
Ingeniero en Informática (Bachelor's Degree)
 Acto recepcional 16 October 2017, **Mención Honorífica**; degree issued 22 March 2018. Registered with the Mexican Secretaría de Educación Pública under Cédula Profesional 12320388.

Certifications and Languages

- **LangChain, LangGraph y Agentes IA con Python** — Udemy, 18h (2026). **EF SET English Certificate** — 41/100, B1 Intermediate (2025).
- **Claude AI (×2), AI Tools for Developers, Prompt Engineering, Docker (×2), Node.js Fundamentals, Backend Development, Design Patterns and Best Practices in PHP** — Platzi (2024–2026), part of around 90 course certificates.
- Spanish (native); English B1 Intermediate, EF SET certified, technical reading at B2. More references are available upon request.
